

300 WATER LEADERS

SDG6 for 300 million people, driven by
300 ambitious leaders

Our mission

Successful utilities are the absolute core of SDG6. The 300 Water Leaders initiative aims to **accelerate the success of 300 utilities to ensure that 300 million additional people are connected to water and sanitation services by 2030.**

The 300 Water Leaders is founded on the belief that **peer-learning can spark utility transformation.**

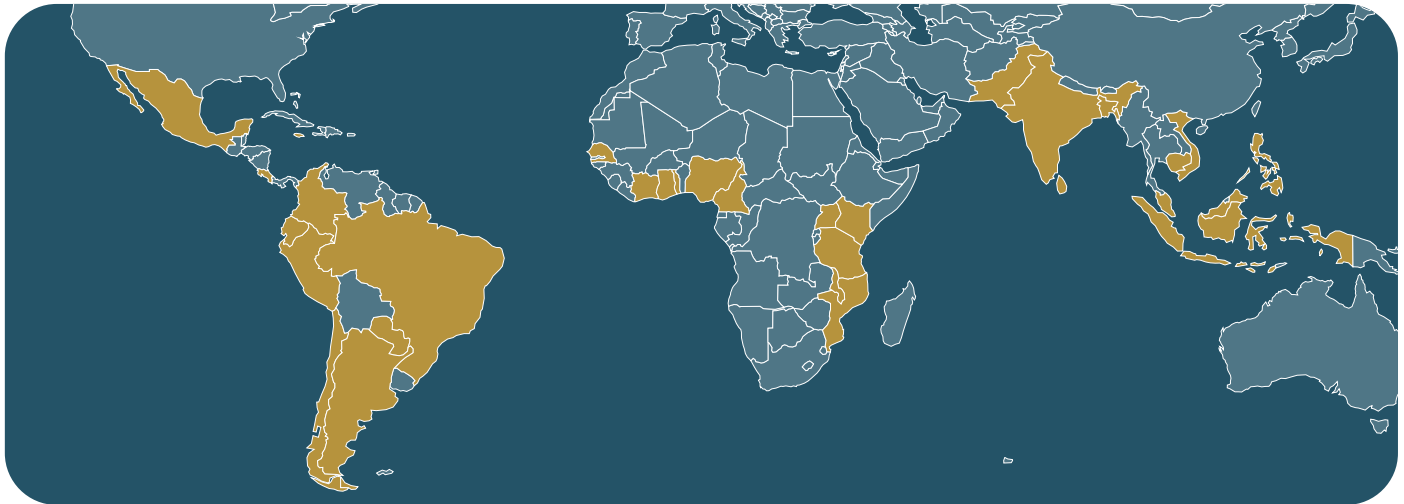

In addressing common challenges as a group, **leaders can learn about potential solutions and replicate successful initiatives.**

The initiative is an official pledge to the **UN Water Action Agenda.**

Our members

Members of the 300 Water Leaders have made a commitment to approach SDG6 with bold ideas and rigorous strategies. Each utility submits a pledge to outline how many additional people it plans to serve by 2030 in relation to SDG6. This collective pledge acts as an aspirational target for the group and illuminates the scale of the challenge ahead.

Membership benefits

Peer-to-peer learning is at the heart of the 300 Water Leaders initiative. We believe that through in-person workshops, webinars, and other online forums, leaders can learn from each other and accelerate their utility goals.

Our ambitious member utilities also have the opportunity to join a CEO-level exclusive WhatsApp community. Leaders can access the network at the touch of a button to exchange ideas and share success stories throughout the year.

Our yearly programme of events includes:

Annual global meeting at the Global Water Summit

Annual Global Water Awards

In-person regional workshops

Webinars

How to join

To join, your utility must submit a non-binding pledge outlining how many additional people you plan to serve by 2030 (or additional capacity for bulk water producers) in line with SDG6. Access the template pledge via the QR code and submit to **mhb@globalwaterintel.com**
